For the Health of Your Patients:

Research has clearly demonstrated that diet alone may not supply nutrients in sufficient amounts necessary for overall good health. Many studies support the use of dietary supplementation to ensure adequate consumption of important nutrients. A growing number of doctors, researchers, and nutritional experts agree that supplementation is important to protect against common deficiencies, many of which have been linked to unwanted chronic conditions, and to provide support for optimal physical and mental wellness. Therefore, for generalized well-being, a complete multi-vitamin and mineral formula is required to ensure that the nutritional basics are covered. Compounding the widespread need for dietary support, modern diets heavy in sugars, carbohydrates, and saturated fats have resulted in widespread glucose dysregulation issues. Effective regulation of blood glucose has important implications for health. Even mild disruptions of glucose homeostasis can have adverse consequences. Chronic diabetes may result in cardiovascular disease, neuropathy, blindness, or renal failure. Hypoglycemia (also called reactive hypoglycemia or dysinsulinism), though not generally associated with the organ damage seen in diabetes, can be responsible for a number of troublesome physical and psychological symptoms. **GlucoBalance®** was specifically formulated to support normal glucose levels.

For the Health of Your Practice:

GlucoBalance® is a versatile, balanced multiple vitamin and mineral combination formulated by Dr. Alan Gaby and Dr. Jonathan Wright. In addition, it contains several nutrients essential for glucose metabolism including: 1,000 mcg of chromium (as aspartate) – required for GTF (Glucose Tolerance Factor), niacin– a vital component of GTF, niacinamide – which is necessary for producing NAD (Nicotinamide Adenine Dinucleotide) in insulin secreting pancreatic B cells, biotin – essential for glucose phosphorylation by hepatic glucokinase, the first step in glucose utilization, and antioxidants such as vitamin E and selenium. As always, you can count on Biotics Research Corporation to provide you with superior nutritional supplements; the “Best of Science and Nature.”
